

**SPECIFICATION AMENDMENTS**

*Page 6, lines 13-18:*

Figure 4 illustrates a hip-joint embodiment of the invention, including an upper, waist-encircling band 402, evacuated a port 406, a lower band 404, evacuated through a port 408, and a hinge member 410, having an upper portion 412 adhered to the band sleeve 402 and a lower portion 414 adhered to the lower band sleeve 404. Again, though this is shown as hinged, a rigid member may be used for a more global restriction of motion, depending upon the application.

*Page 6, lines 22-26:*

Figure 6 illustrates a wrist brace embodiment, including a sleeve 602 [[402]], which may or may not be long enough to have one or more finger-receiving apertures, which is evacuable through a port 603. Although a hinged brace member may be used, Figure 6 illustrates the use of a single rigid element 604, though additional elements may be used, depending upon the nature of the injury.
